EFLEX-M1 is the covering sleeve that is part of the EFLEX[®] system.

If the 1 metre long EFLEX1 cable duct is not long enough for your linear configuration, you can easily extend it by using a second length connected to the first by the covering sleeve. Nothing could be simpler: the sleeve is mounted by clipping it on the cable duct and screwing it to the wall, which also makes the installation more secure. Two rings at the top and bottom of the part are provided for the screws.

This connection is aesthetic: as it is made by overlapping, no cut is visible. Moreover, the satin chrome finish is in perfect harmony with all other elements.
