These nickel-plated end caps are necessary complements for stainless steel door loop in roll RLI10. They ensure protection and also allow to fix both ends of the white sleeve: one end is surface-mounted on the leaf and the other on the door or window frame.

2 end caps are needed to obtain a complete door loop, which allows constantly electric current flowing between the opening and the frame, to feed the connected devices.

Made of zamak, in nickel finishing, they are supplied in packaging units of 20 pcs.

Also provided: 80 fixing screws (4 pcs are required for each end cap) and 20 door loop holding pieces.
