The reinforcement profiles for EM handles offered by SEWOSY are additional accessories expanding the CPREG-1 / CPREG2N / CPREG2NAR product lines. Two models are available: with or without handle, used in combination or individually.

Made of aluminium with mill finish, they can be cut according to door dimensions.

These accessories designed to reinforce the equipment are mounted on the door side opposite to that on which the EM handle is fitted. That way, they allow a fixation throughout the door leaf, consolidating the whole installation. Moreover, thanks to their implementation, the attachment holes are hidden, preventing vandalism by rendering the fixing screws inaccessible, while improving the aesthetic.

Furthermore, this reinforcement profile offers the practical advantage of an integrated handle, facilitating the door opening and closing.

This model is adapted to CPREG®EM handles with a height of 400 mm.

Versions with mill finish can be powder coated in the most RAL colors, to match with EM handles benefiting from this option.
