Especially designed to fit furniture like caisson doors, closet doors, drawers, or display cases, lockers, access hatches or cabinet doors, this electromagnetic bolt with compact device is surface-mounted to the vertical solely on swing or sliding door leaves.

Coming with its counterparty which adjusts laterally or frontally according to the configurations, this compact bolt consumes low energy: 300 mA with 12V and 150 mA with 24V. Only supplied with DC voltage, the electromagnetic bolt runs silently.

In accordance with the IP42 protection index, this electromagnetic bolt resists to foreign bodies having a diameter higher than 1 mm, and to water drops of 15° relative to the vertical.
