SHOK_K reset key for manual call points from SHOK® range

Your manual call point SHOK® comes with 2 reset keys.

It includes a key holder located on the rear, on both sides of the surface mounting box, in order to stock the 2 keys and minimize the risk of loss.

It is, however, possible that a key breaks or is missing, if it is not stored in the slot provided for that purpose.

If you need to order a replacement key, use the SHOK_K product number!
