The KRN1000 (125 kHz - Marin) supplied with 12 or 24 V AC/DC, grants access depending on desired security level: it works as a stand-alone proximity reader (identification via RFID card or tag or keyfob) or as a keypad (by entering pin codes) or in combination of both.

Thanks to narrow design (45 mm), it's a multi-purpose system, ideal for surface mounting on poles or walls.

Weather protected by an IP 65 rating, equipped with a 3 m long cable, secured by its anti-vandal system and backlit metal keys, the KRN1000 is perfectly suited to withstand challenging environments: outdoor as well as indoor!

2 relays allow an easy programming up to 1010 users. Fitted with doorbell function, push button and door contact inputs, operating by selecting timed or bistable mode, this robust and very functional device consumes low energy: only 110 mA.
